SPECIFICATIONS

SCOPE OF WORK

The work to be done under this specification shall consist of: (1) Edge milling curbs (2) Sweeping and Cleaning the existing asphalt surfaces; (3) Applying a tack coat followed by the placing and compacting of the hot-mix asphalt surface course; and (4) All intersections of streets within the designated areas shall be paved to the curb returns or end of radius for turnouts, unless instructed otherwise by the City. The center of the streets will be marked by your company, with yellow marking tape squares as needed for the drivers to locate the centerline until a permanent line is painted.

CLEANING & SWEEPING

All existing roadway pavement shall be cleaned by mechanical sweeping and blowing prior to placing the tack coat. Sweeping and blowing shall remove all vegetation, dirt, gravel, and loose rock before placing the tack coat.

HOT MIX ASPHALT SURFACE COAT

1. **GENERAL:** The hot-mix asphalt surface course shall consist of one course constructed on the existing asphalt surface in accordance with the requirements of the specifications and shall be constructed in conformity with the existing lines, grade, and compacted thickness as shown on the bid form.
2. **PLACING THE MIX:** A tack coat (refer to miscellaneous specifications) shall be applied prior to the placing thereon of the surface course. The hot-mix asphalt surface course shall not be placed when weather conditions are unfavorable. The hot-mix asphalt surface Course shall be placed with a self powered asphalt paver capable of operating at variable speeds and spreading and finishing the mix without segregation, and to the depth, as shown on the bid form. The screed or strike-off assembly shall be adjustable to the required crown and shall be designed to lay the pavement mixture in widths from 8 feet to 12 feet in increments of one foot or less without use of forms. The temperature at which the mix shall be placed shall be between 225_ and 325_ F. Placing the mix shall be in continuous operation and the paver shall place the mix to a smooth surface that is uniform in density and texture.
3. **COMPACTING THE MIX:** The mix shall be compacted immediately after placing. Initial rolling shall follow the paver as close as practical and shall be performed with a power driven steel roller weighing not less than 8-10 tons. The longitudinal joint shall be rolled first in order to achieve a thoroughly compacted neat joint. Final rolling shall be done with the same equipment used for initial rolling and shall eliminate marks for previous rolling.

MISCELLANEOUS SPECIFICATIONS

TACK COAT: A tack coat of approximately 0.05 to 0.10 gallon per square yard shall be applied where necessary by a pressure distributor designed and operated to distribute the tack coat uniformly, without atomization in the amount and between the limits specified.

In places where the distributor bar cannot reach, a hand spray may be attached to the distributor hose. The tack coat shall be applied on only as much pavement as can be covered with the next successive course of hot-mix asphalt pavement in the same day.

HOT-MIX ASPHALT PLANTS: Batch or continuous mix plants used in the production of the hot-mix asphalt paving mixtures specified herein shall be capable of satisfying the requirements of the Georgia Department of Highways Standard Specifications with a 9.5 mm type 2 mixture with lime on ALL STREETS.

TRAFFIC CONTROL: Traffic shall be directed through the project with such signs, barricades, devices, flagmen, and pilot vehicles.

SAFETY: Company safety precautions shall be used on all job sights.

All Occupational Safety and Health Act requirements shall be observed.

METHOD OF MEASUREMENT: The quantities to be paid for will be measured by number of short tons of asphalt paving mixture actually used in the work. The mixture shall be measured by truck scales or, if the plant is so equipped, by an automatic batching and mixing control system with an automatic digital printer for batch weights and component materials weights. Provide the Cities inspector with one ticket for each truck load delivered to the job site.

BASIS FOR PAYMENT: The quantities measured as herein before described will be paid for at the contract unit bid price for each ton of asphalt in place. Payment will be in full compensation for furnishing all materials: for mixing, hauling, and placing the asphalt mixture; for rolling, for use of equipment, tools, and incidentals; and for traffic control necessary to complete the work in accordance with these specifications.

PARTIAL PAYMENTS: At the end of each calendar month during the life of the Contract, the Contractor may prepare an estimate of the quantities of work completed and of the total amount due therefore. On or before the fifteenth (15th) day of the following month the City will make a partial payment to the Contractor equivalent in the amount to the value of all work done to the end of the preceding month, less ten (10) percent of such amount to be retained, less previous payments.

The retained amounts shall be held by the City until final completion and acceptance of all work contemplated under the Contract, at which time the retained amounts and other documents then due shall be paid in full.
